Breast Cancer

[Clinical Overview](#) [View Full Topic](#)

Elsevier Point of Care

Key Points [^](#)

Breast cancer in females is a malignant neoplasm of the breast, most commonly ductal or lobular carcinoma

2 most common presentations of breast cancer are mammographic abnormality on screening or palpable mass in breast discovered by physician or by patient

Diagnostic testing usually involves a triad of mammography, ultrasonography, and biopsy

Coexisting cardiac, renal, and hepatic disease may limit the choice of chemotherapeutic regimen; pregnant women and women of childbearing potential require special consideration regarding treatment and future fertility

Treatment is based on staging and requires a multimodal approach including surgery, radiotherapy, and drug therapy (hormonal agents, chemotherapy, and biologic modifiers)

Complications include metastases (commonly to bone, brain, lung, and liver), spinal cord compression, hypercalcemia, upper extremity lymphedema, cardiac dysfunction secondary to chemotherapy, and infertility in premenopausal patients... [More](#)

BOOK CHAPTER
Breast Cancer and Benign Breast Disorders

Nancy E. Davidson
Goldman-Cecil Medicine, 198, 1351-1360.e3

Invasive breast cancer, the most common nonskin cancer in women in the United States, will be diagnosed in approximately 232,000 women in 2014 and will result in approximately 40,000 deaths. Incidence and mortality from breast cancer appear to be dropping in the United States and parts of Western Europe. This decline is believed to reflect early detection by screening mammography and widespread use of adjuvant systemic therapy, as well as decreased use of hormone replacement therapy.

Breast Cancer

◆ **Epidemiology and Pathobiology**

Multiple risk factors for the development of breast cancer have been identified ([Table 198-1](#)). The principal risk factor is gender. Breast cancer is largely a disease of women, although it does occur in men at an incidence of approximately 1% that seen in women. A second critical risk factor is age. Approximately 75% of breast cancer cases in the United States are diagnosed in women older than 50 years of age.

Quick Reference (QR) Video Access

Lee Goldman MD and Andrew I. Schafer MD
Goldman-Cecil Medicine, IFC3-IFC9

The images below are QR codes. Each code corresponds to a video from the *Goldman-Cecil Medicine 25* collection. For fast and easy video access, right from your mobile device, follow these instructions. The videos are also available on Expertconsult.com.

What You Need

- A mobile device, such as a smartphone or tablet, equipped with a camera and Internet access
- A QR code reader application (If you do not already have a reader installed on your mobile device, look for free versions in your app store.)

How It Works

- Open the QR code reader application on your mobile device.
- Point the device's camera at the code and scan.
- Each code opens an individual video player for instant viewing—no log-on required.
